

I really OPPOSE HR 4026. You know there are other things in this world to worry about then what Satellite Radio is doing. Maybe if the NAB did their job right and offered what Satellite Radio does then hey no problem. I like that I can just hit a button and hear the traffic and weather of my area instead of waiting and waiting and waiting for a local station to say what's going on. Sorry the government is paying attention to petty things. I'm also getting tired of my tax money being wasted on crap like this. You know maybe no one should pay any kind of tax until the government can prove that they are spending it right.

Plus, I know a few of us area getting ready to take some kind of legal action against the NAB and government if they follow threw on this crap. We would sue for the years that we have paid up front and for all of our units and that's a heavy price of up to like 5 million at this time and growing. Now if you guys can fork out all that money then great go ahead but I believe that you can't and will not. SO BACK OFF SATELLITE RADIO!!!!

Thanks for the time!
